Student Signature(s): _____

Student Signature(s): _____

Student Signature(s): _____

Project Guide Verification

I have reviewed the Stage–1 submission and verified the progress reported by the project team.

Project Guide Name and Signature: _____

Project Coordinator Verification

Name and Signature: _____

Head of the Department

Name and Signature: _____

Date: _____

PROJECT STAGE–1 SUBMISSION REPORT

B.Tech IV Year – Project Work

Academic Year: 2026–2027

Student and Project Details

Hall Ticket Number(s)	
Project Guide Name	
Project Domain	
SDG Number and Goal	
Date of Submission	

Abstract

The abstract should normally be approximately 150–250 words.

Introduction

Background of the selected domain.

Importance and relevance of the problem.

Motivation for selecting the project.

Scope and significance of the proposed solution

-

Problem Statement

Clearly define the problem to be addressed, the limitations of existing solutions, the target users, and the expected improvement through the proposed project.

Objectives

List the specific objectives of the project. The objectives should be measurable, realistic, and achievable within the project duration.

Literature Survey

Review relevant research papers, journal articles, conference papers, and existing systems.

Research Gap and Proposed Solution

Research gaps identified from the literature survey.

Limitations of existing systems.

Novelty or improvement proposed.

Expected advantages of the proposed solution.

Requirement Analysis and Feasibility Study

Functional Requirements

Non-Functional Requirements

Technical Feasibility

Identify the programming languages, frameworks, algorithms, software tools, hardware, and technical resources required.

Operational Feasibility

Explain how the proposed system can be used by the intended users and how it addresses the identified problem.

Economic and Time Feasibility

Estimate resource costs, available resources, and whether the project can be completed within the allotted time.

Dataset Collection / Resource Identification

Proposed Methodology

Software and Hardware Requirements

Sustainable Development Goals (SDGs)

Identify the relevant United Nations Sustainable Development Goal(s) supported by the project.

Preliminary System Design

Include relevant diagrams based on the project requirements:

System architecture / block diagram.

Expected Outcomes

Describe the expected deliverables, intended users, anticipated benefits, and measurable outcomes.

Project Work Plan for Stage–2

Challenges and Limitations

Mention challenges encountered during Stage–1, resource constraints, dataset availability issues, technical limitations, and proposed mitigation measures.

Conclusion

Summarize the problem identified, findings from the literature survey, research gap, feasibility, proposed methodology, work completed, and readiness for Stage–2 implementation.

References

List all research papers, books, websites, datasets, software tools, and other sources consulted using a consistent referencing style, preferably IEEE format.
